Description

The Human T-Cell & B-Cell Activation V2 miRCURY LNA™ miRNA Focus PCR Panel profiles the expression of 84 miRNAs involved in the activation and differentiation of T cells and B cells. This array provides scientific researchers with a convenient way to quickly analyze the miRNAs most relevant to specific stages of T cell and B cell development. Hematopoietic stem cells differentiate into lymphoid and myeloid progenitor cells. To develop into T cells, lymphoid progenitor cells migrate to the thymus, where T cell lineage commitment starts with the double negative (CD4-/CD8-) stage. The cells proceed through the double positive (CD4+/CD8+) stage, and end with the single positive stage, generating either naïve CD4+ or naïve CD8+ T cells. During the adaptive immune response, naïve CD8+ T cells interact with antigen and activate, differentiating into effector T cells and potentially memory T cells after antigen clearance, while naïve CD4+ T cells activated by antigen differentiate into helper T cells. B cells mature in the spleen and remain naïve until they encounter antigen. Activated B cells differentiate into plasma B cells or memory B cells, or undergo an intermediate differentiation step and switch antibody classes to become germinal center B cells. T cell and B cell activation involves many sequential steps and the careful timing of cellular signaling pathways. Specific miRNAs play roles in fine-tuning the differentiation and activation of these essential immune cells, and dysregulation of B cell or T cell functions can cause immunodeficiencies or cancer. A set of controls present on each array enables data analysis using the $\Delta\Delta CT$ method of relative quantification, assessment of reverse transcription performance, and assessment of PCR performance. Using SYBR Green-based real-time PCR, the expression of a focused panel of miRNAs involved in T cell and B cell activation can be easily and reliably analyzed with this miRCURY LNA™ miRNA Focus PCR Panel.

Important

The miRCURY LNA™ miRNA PCR Panels are Ready-to-Use and designed for optimal performance with the miRCURY LNA RT Kit and the miRCURY LNA SYBR® Green PCR Kit. The performance of the primer sets will be affected when used in combination with less than optimal reagents. Use the miRCURY LNA miRNA PCR Panel Handbook for experiment setup. RNA work requires specific handling and precautions should be taken to prevent RNase contamination and degradation of the RNA sample and reagents.

Shipping and storage

The Ready-to-Use miRCURY LNA miRNA PCR Panels are shipped at room temperature and can be stored at 4°C for at least 6 months. For long term storage, it is recommended to place the panels at -20°C. Under these conditions, the LNA PCR primers are stable for at least 6 months after receipt.

Intended use

miRCURY LNA miRNA PCR Assays are intended for molecular biology applications. This product is not intended for the diagnosis, prevention or treatment of a disease.
